

**28.** Why do computer-generated images use false colors?

- (A) The real objects are too bright to look at.
- (B) The computer screens have a limited range of colors.
- (C) The properties represented in the image are not otherwise visible.
- (D) The colors are used to convert black-and-white photographs.

**29.** Why does the author mention "x-ray emissions" in line 25?

- (A) To discuss the measurement of energy flow
- (B) To emphasize the precision of direct photography
- (C) To provide an example of what false colors represent
- (D) To compare the properties of color and movement

**30.** Where in the passage does the author mention a disadvantage of photography?

- (A) Lines 1-3
- (B) Lines 7-11
- (C) Lines 18-21
- (D) Lines 24-25
